Eligible to sign an internship agreement via IE University

SUMMARY

Ambitious Computer Science and Artificial Intelligence student with a growth mindset and hands-on experience in real-time application development. Skilled in applying data structures, algorithms, and engineering principles to solve complex problems within collaborative, multicultural environments. Committed to leveraging cloud technologies and best practices to deliver high-quality, user-centric software solutions that drive product reliability and efficiency.

EDUCATION

IE UNIVERSITY (IEU) | Bachelor in Computer Science and Artificial Intelligence

Madrid, Spain

Scholarship: High Potential Scholarship | GPA 8/10

Jul 2027

NARAYANA HIGH SCHOOL

Hyderabad, India

Role: Class delegate | 91% /100

Jun 2023

EXPERIENCE

WHITEHOLE

San Sebastain, Spain

AI Research Intern

July 2026 – Present

- Building full-stack features across AI-powered platforms including Atlas Core (temporal knowledge graph with GPT-based entity extraction and near-real-time querying) and Mercurio (multi-agent conversational reporting system).

SILK Cashback

Madrid, Spain

AI and Software Engineering Intern

Feb 2026 – April 2026

- Diagnosed and resolved bugs across a Python/FastAPI backend and Flutter frontend, improving application stability and reducing recurring issues in production.
- Built and deployed an AI-powered product recommendation chatbot using LangChain and LLMs, integrating it end-to-end into the app to deliver personalised cashback suggestions to users.

IE Coding Club

Madrid, Spain

Technical Coordinator

Oct 2025 – Present

- Coordinated technical workshops and sessions focusing on Artificial Intelligence (AI) and programming fundamentals for the student community. Support project development initiatives, assisting peers in debugging code and applying practical programming skills.

Exprs Techno Logistics

Hyderabad, India

Data Sourcing & AI Development Intern

Jun 2025 – Aug 2025

- Improved search and matching functionality by organising sponsor data and implementing prompt engineering strategies to enhance platform efficiency and automated content generation.
- Refined UI content flows through user feedback and engineering-based improvements, increasing usability and user alignment.

MAJOR PROJECTS

AI Skincare Recommendation System

- Built an ML recommendation system with a chatbot to deliver personalised skincare suggestions using user behaviour analysis, predictive modelling, and data-driven recommendation algorithms.

NLP Research Project

- Analysed alignment drift and failure modes in transformer-based large language models to improve model reliability, robustness, and response quality.

Amazon ML Challenge

- Developed an ML pricing model to predict optimal product prices in e-commerce by analysing product attributes, brand, specifications, and quantity-related features.

UNO Game Agents

- Developed an UNO agent using Information Set Monte Carlo Tree Search (ISMCTS) to make decisions in imperfect-information game environments and compete against other agents.

Intelligent Exam Proctoring System

- Developing a computer vision-based exam proctoring system using pretrained object detection and head-pose estimation to detect unauthorised electronic devices, identify suspicious gaze deviations, and generate timestamped alerts from classroom video.

EXTRACURRICULAR ACTIVITIES.

- IE Sustainability lab:** Proposed ESG data model in collaboration with Designit(Wipro) for impact measurement (**June 2023**).
- IEU Mentor :** Assisted incoming IE students (**2024 – 2025**).
- IE Shadowing:** Collaborated on VR initiatives, supported campus events, and conducted surveys to improve student experience. (**Sep 2024-2025**)
- IE India Club:** Organised cultural, Networking events, social media management and designed marketing materials at IE University. (**2023– 2026**)
- IE Venture Bootcamp:** Co-developed and pitched a startup idea; selected runner-up in Venture Bootcamp. (**April 2025**)
- Hackathon:** Participated in hackathons like Iberdola datathon, Cursor, lovable, Tata Hackathon and Amazon ML challenge.

LANGUAGES

- English** (Fluent), Hindi, Spanish

ADDITIONAL INFORMATION

Skills: Python, SQL, Java, C, Machine Learning, Deep Learning, Generative AI, Prompt Engineering, NLP, Computer Vision, Recommendation Systems, Anomaly Detection, Predictive Modelling, ML Pipelines, Data Analysis, Git, AWS, Azure, Data Structures and Algorithms
